"Announced" SKUs are not yet available. Please refer to the Launch Date for market availability.

The Recommended Customer Price ("RCP") is pricing guidance for Intel products. Prices are for direct Intel customers and are subject to change. Prices may vary for other package types and shipment quantities, and special promotional arrangements may apply. Listing of these products does not constitute an offer. Please contact your appropriate Intel representative to obtain a formal price quotation.

"Intel classifications" consist of Export Control Classification Numbers (ECCN) and Harmonized Tariff Schedule (HTS) numbers. Any listing of these numbers shall not be construed as a representation or warranty regarding the proper ECCN or HTS. Your company may be the exporter of record and is responsible for the correct classification of any item at the time of export.

Intel processor numbers are not a measure of performance. Processor numbers differentiate features within each processor family, rather than performance levels. For more information, see <http://www.intel.com/content/www/us/en/processors/processor-numbers.html> for details.

Hyper-Threading Technology (HT Technology) requires a computer system with an Intel® processor supporting HT Technology and compatible operating system. Performance will vary depending on the specific hardware and software you use. See <http://www.intel.com/content/www/us/en/architecture-and-technology/hyper-threading-technology.html?wapkw=hyper+threading> for more information including details on which processors support HT Technology.

64-bit computing on Intel® architecture requires a computer system with a processor, chipset, BIOS, operating system, device driver and application software that all support 64-bit operation (including 32-bit operation) without an Intel 64 architecture-enabled BIOS. Performance will vary depending on your hardware and software configuration. For more information, see [Intel 64 Architecture](#).

Max Turbo Frequency refers to the maximum single-core frequency that can be achieved with Intel® Turbo Boost Technology, which dynamically increases the frequency of the processor to increase performance. Intel Turbo Boost Technology performance varies depending on hardware, software, and overall system configuration. Check the processor specifications for details on Intel Turbo Boost Technology. See www.intel.com/technology/turboboost/ for more information.

Intel® Identity Protection Technology (Intel® IPT) requires a combination of processor, PCH (Platform Controller Hub) and software. For more information, see [Intel® Identity Protection Technology](#).

Graphics output, multiple displays, ECC memory, specific PCI Express configurations, Intel® vPro™ Technology, Intel® Trusted Execution Technology (Intel® TXT) may not be available on all computing systems. Please reference the system, motherboard or chipset specifications for compatibility.

Enabling Execute Disable Bit functionality requires a PC with a processor with Execute Disable Bit capability and a supporting operating system. For more information, see [Intel® Execute Disable Bit Technology](#).

***Trademarks**

All information provided is subject to change at any time, without notice. Intel may make changes to manufacturing life cycle, specific information herein is provided "as-is" and Intel does not make any representations or warranties whatsoever regarding accuracy of the compatibility of the products listed. Please contact system vendor for more information on specific products or systems.

Some products can support AES New Instructions with a Processor Configuration update, in particular, i7-2630QM/i7-2635QM, i7-2670M contact OEM for the BIOS that includes the latest Processor configuration update.
