

Justification for considering HP, DELL & LENOVO for Business Desktops

Background

KRIBHCO, Surat, over the years (2012-2023) has procured about 450 desktop computers which amounts to average 40 desktops yearly. We have about 450-500 desktop users currently in Hazira plant using desktops from Win7,8,10&11 OS. The desktops are mainly procured for replacement due to technology obsolesce. Currently about 150 users are using Win 7&8 OS desktops which are outdated and in need of replacement. In the past decade KRIBHCO has procured desktops mainly of HP, Lenovo and Acer make. 170 Nos. of Acer make desktops have been procured since 2022, mainly due to their competitive pricing over HP, Dell and Lenovo.

Issues with Acer Desktops

Off-late, mainly since last one year, we are grappling with following issues with Acer desktops:

1. About 50% (34 incidents) of desktops procured in the last lot (70 Nos. procured wide PO# 5021259) reported Monitor Adapter failure.
2. 12 other incidents were reported with SSD failure (3 Nos.) Motherboard & processor failure (2 Nos.) and others reporting keyboard, mouse malfunctions.
3. Long turn-around time for obtaining service for affected devices.

Therefore, product quality and sub-optimal support from OEM has led to reliability issues in our desktop landscape mainly during last one year.

Proposal

In lieu of above, it is suggested to procure business desktops from HP, DELL & LENOVO OEMs to ensure performance, dependability, and support, ultimately leading to improved productivity and reduced total cost of ownership.
